

Team Group: Shipsterr WebSite

Date:07/01/2019

UC Santa Cruz

Product Name: “Shipsterr”

Abstract:

Our proposal prototype is making a “Parcel Website Calculator ” with specific target function to provide the best comparison rates from different parcels allowing users to compare different rates and best option prices for their process of delivery.

High Level Goals:

Objective:

The Website application “Shipsterr” will allow users and customers to be available to compare different rates from different parcels nationally provided the best prices for users

Development a website to search all the price of most of the major shipping companies in the U.S.A. for shipping a package inside the U.S.A.

User Stories For Release:

- As a user, I want a usable User Interface so I can use the application.
- As a user, I want a polished User Interface so that I feel like I’m using a well made application.
- As a person who is planning on shipping something, I want a cost calculator so that I know how much I have to pay.
- As a customer of Fedex, I want to be able to select Fedex shipping label even though if it is a little bit more expensive, because I like the company.
